SINGLE COMPRESSOR CONTROL SYSTEM

The *Wizard Single Compressor Control (WSCC)* is designed to operate a large, multiple cylinder reciprocating compressor utilizing ammonia and most halocarbon refrigerants.

Suction Pressure Control --The WSCC will maintain the suction pressure as close as the Suction Pressure Setpoint by turning on/off the compressor and the unloaders.

Condenser Control -- The WSCC operates a single condenser circuit based upon a fixed head pressure setpoint. The WSCC activates this control scheme whenever the compressor is running.

Compressor Cylinder Cooling -- The WSCC monitors the temperature of the compressor head, cycling a relay to start head cooling should the temperature exceed a user configurable setpoint. This relay can be used for a head fan, liquid injection, or a water cooling system.

Monitoring & Alarming -- The WSCC monitors six separate sensors and activates alarms based upon user definable alarm setpoints. These alarms include:

- High / Low Suction Pressure
- High / Low Oil Temperature
- High / Low Head Temperature
- High / Low Head Pressure
- High / Low Discharge Temperature
- Low Oil Pressure Differential

System Standby -- The WSCC can be utilized as a sub-controller for a larger refrigeration control system. A close signal to the STANDBY input will shut down all compressor operations. The system remains in standby mode until receiving an open.

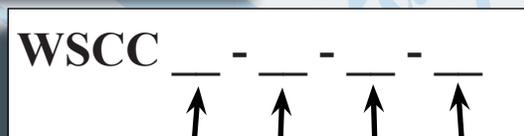

"MASTER / SLAVE" WSCCM Feature

Multiple WSCC controls can be linked together using the 2 wire communications input on the control board. One control is configured as the "Master" and the rest as "Slave" controls. The main "Master" control will stage all of the linked controls Compressors and Unloaders using the "Master" control's suction setpoint for up to one "Master" and five "Slaves".

The WSCC "Master / Slave " configuration has a built in protection. If for any reason the "Slave" Control loses communication with the "Master" control, the "Slave" will display the alarm message "MASTER COMM ERROR" and take over individual control of its specific Compressor / Unloader Routine using its own individual suction setpoint.

Please Note: The Genesis International Software systems "GenCom For Windows" and "GenCom 3000 Supervisory and Alarming System" can not be used when the WSCC Master and Slave networking configuration is selected.

Single Compressor Control System	WSCC
Master Compressor Control System	WSCCM
<u>Kits Include:</u>	
Control(s)	Enclosure (Where applicable)
Power Supply	Temperature Sensor (Oil, Head Discharge)
O-M Manuals	Installation Hardware
Pressure Transducer (Suction, Head & Oil)	

<u>Pressure / Temperature Range</u>	
Medium Temp (0 to 200 PSIG Transducer)	blank
LowTemp (-14.7 to 100 PSIG Transducer)	LT

<u>Enclosure Option</u>	
Nema 1 (Standard)	blank
Panel Mount (Standard)	PM
Nema 4	4

<u>Enclosure Mounted Alarm Strobe Light Option</u>	
None (Standard)	blank
Enclosure Mounted Strobe Light	S

<u>Communications Option</u>	
RS485 (Gencom) Remote Comm (Standard)	blank
RS232 Communications	232
Ethernet (Gencom) Comm	E
ModBUS Network Comm	M
BacNET Network Communications	B
